Professional Summary

Web Design and Development student at Hillsborough Community College, working toward an Associate of Science in Internet Services Technology: Web Design & Development. I build and maintain responsive websites using HTML, CSS, JavaScript, React, and WordPress, and I've put that to use outside the classroom too — hardening a client site's security, building a team dashboard that pulls in live data, and running my own freelance brand, Pixel Designs. Looking for an entry-level front-end development or web design role where I can keep building real projects and learning from an experienced team.

Projects

Client Website — Seely's Site (Freelance Client Work) <https://blincoechad.github.io/SeelysSiteBuild/>

- Built and maintain a static HTML/CSS site for a real freelance client, an educator and IEEE member.
- Hardened site security with custom HTTP headers in Vercel.json, raising the site's Beagle Security score from 21 to 68.
- Added Vercel Speed Insights to track load performance on an ongoing basis.

Pixel Designs — Freelance Portfolio Brand — blincoechad.github.io/PortfolioLandingPage

- Designed and built my own freelance portfolio site from scratch, including a custom dark navy/cyan design system.
- Built a responsive, staggered service-card layout with custom breakpoints for mobile and desktop.
- Integrated a working contact form (Formspree) and embedded video content, and I'm currently working through SEO crawl issues flagged by Semrush.

Vanguard AI — Web Scraping LLM Intelligence Dashboard (Team Project) – GitHub Repo (<https://github.com/Blincoechad/VanguardIntelligence>)

- Owned front-end design and development for a four-person team, from the original Figma mockups to the final presentation to the company board.
- Rebuilt the front end from React/Vite to Flask/Jinja2 after a mid-project stack change, without losing progress.
- Built the severity badge system, light/dark themes, mobile-responsive layouts, and UI safeguards that flag weak or unreliable data.

Technical Skills

- Languages & Frameworks: HTML, CSS, JavaScript, React, WordPress
- Design & Prototyping: Figma, Canva, Adobe Photoshop, Illustrator, InDesign, Premiere Pro, Lightroom
- Tools & Practices: Git, GitHub, Vercel, Responsive & Mobile-First Design, Web Accessibility Basics
- Other: Google Analytics (foundational), Microsoft Office & Excel, Project Management, Customer Service

Work Experience

Bar Manager — Big Whiskey's 2018–2020

- Managed scheduling, inventory, ordering, and cash handling for a full bar; cut monthly labor costs by roughly 15% through better scheduling.

Project Manager / Sales — Restore Masters 2017–2018

- Managed jobs and trained new employees; helped build the company's online presence and created marketing materials.

Bartender — Acropolis Greek Taverna 2021–2022

- Handled customer service and POS transactions in a fast-paced environment.

Event Coordinator — Piropos Restaurant 2015–2017

- Coordinated events, employee scheduling, reservations, and supplies.

Education

Associate of Science, Internet Services Technology (Web Design & Development)

Hillsborough Community College — Currently Enrolled

- **Professor nomination for Student Excellence Award — available for reference on request**
